Following in Parkroyal's footsteps in building environmentally friendly buildings is Oasia Hotel Downtown in Singapore, which was designed by the same architectural firm, WOHA.

The hotel building has a red facade decorated with various types of plants.

The 27-story building is equipped with three large swimming pools and three terraces. To enhance the appearance, the architects of this building also used aluminum cladding.

The trellis-like cladding gives the building a very striking look.

Oasia Hotel is equipped with 21 types of vines that provide food for the birds and insects around it.

It was named the "Best Building in the World" by the Council on Tall Buildings and Urban Habitat in 2018. (liz/wng)
